Background

What is Zoning?

Zoning is the regulation of our built environment: types of buildings, their locations, and their uses.

Central Elements of Zoning

- The Zoning Map
- The Zoning Ordinance
- Dimensional Requirements
- Development and Use Standards
- Decision Making Processes

The Zoning Map divides the city into districts, each of which represents a different set of land uses and scales of building types.

Newton, Massachusetts Chapter 30: Zoning Ordinance

November 1, 2015

The Zoning Ordinance is the book of rules and regulations for how private property lots are divided, how buildings are constructed on those lots, and how those buildings are used.

Map Making Principles

1) Balance of two goals:

- **Minimize non-conformity**
- **Maximize consistency with existing patterns of development**
 - **Map based in Pattern Book database findings (2017/2018)**
 - **Particular interest in conditions before-tear downs (before 2000)**

2) General Considerations:

- **District lines are at the back of the property**
- **As much as possible, both sides of the street should have the same zoning**
 - **Boundaries occur when the pattern shifts – change in lot width, scale of buildings (footprint and/or height), use or number of units**
- **The exception does not make the rule – 100% conformity is not possible**
